ITT Technical Institute
GPA: 3.5/4.0
Coursework: Network Administration, Information Security, Email / Web Services, Linux, Web design, Java, Android development

Java Academic Badge
Concepts
Java SE 8 Levels I and II Programming, Java SE 6

💼 Experience Highlights

03/2022 – PRESENT   REMOTE, FLORIDA
Senior Developer/Manager Engineer
Razorfish
- Work with teams of developers alongside a team of managers and senior developers. Working one on one with project managers to discuss responsibilities for each team member, timeline and project specific details. Make risk assessments with the project manager for each project that arrives in the development queue. As a senior developer, I'm responsible for delivering quality code and core logic code for complex bank pages and systems. Some of said pages use different API integrations and work with the back-end team to make said integrations seamless. Discuss improvements with the other leads and find how we can improve the service we deliver to the client; this includes; pipeline, development policies, and overall organization that will make the team more efficient at what they do.

03/2021 – 03/2022   REMOTE, FLORIDA
Full Stack Developer
24 Data Inc.
- Spearhead the front-end efforts, meeting the deadlines set by management and/or clients. These efforts include, but are not limited to; API integrations, new page designs, ADA compliant designs, and implementation of new technology for clients working in the financial fields, mainly loan lenders and banks. Collaborate with other senior developers to maintain and improve the back-end PHP/Laravel code base and databases. The back-end efforts include creating logic to handle complex data transfers and/or data calculations to then tie it together with the front-end. Another day-to-day effort to help the system admin maintain certain DevOps efforts on our AWS network.

01/2020 – 03/2021   TAMPA, FLORIDA
Full Stack Developer
Orchid Insurance
- Collaborate in a team environment to meet programming deadlines and maintain the systems. In charge of the development of the company's public API with the senior developer and business analysts' requirements. Part of a development team in charge of production support, manage databases and develop new tools and services.

💼 Experience Highlights

Majority of the production support was configuring Connect. Connect is a system where insurance sensitive data is handled. The company's API purpose was to improve performance, most of my workdays were based on developing this API in Python for the public use and distribution between other insurance providers. Leverage Khoros API to create an insurance agent portal where they could access customer data or distribute information to them. Used Android Studio and Java tools to write APIs for mobile applications consumption.

08/2018 – 01/2020   SEFFNER, FLORIDA
508/WCAG 2.0 -2.1 Accessibility Specialist
Braille Works

- Collaborate in a team environment responsible for processing a variety of documents to meet 508 and WCAG 2.1 standards for accessibility purposes. Accessibility document compliance include, but not limited to; WCAG 2.1 compliance reports using Adobe Common Look, tagging documents, and OCR documents for text accessibility. Apply knowledge of current website development practices in collaboration with the marketing team in order to improve the customer online experience.
- Successfully process documents to meet accessibility standards in a team work environment using tools that include; Adobe, and Adobe Common Look.
- Applying website development knowledge to assist the marketing team with optimizing load speeds, and fix a variety of form issues in the company's website using WordPress and GoDaddy hosting.

08/2015 – 08/2018   TAMPA, FLORIDA
Web Specialist
Electric Supply Inc.

- Acquire and apply knowledge of current and emerging IT practices, to drive day-to-day content management across the Electric Supply website, microsites, and other digital assets. Collaborate with in-house brand, e-commerce, and customer experience teams on design, development, and publishing of website content. Develop landing pages and customer response forms. Create email campaigns and e-commerce email automation plans and develop website graphics.
- Spearheaded project team responsible for developing innovative front-end application enhancements using HTML5, JavaScript and CSS3; design features integrated university network with local businesses. Individual responsibilities include on using HTML5, CSS3, JavaScript and Photoshop on a daily basis to update and find solutions that include; new layout,
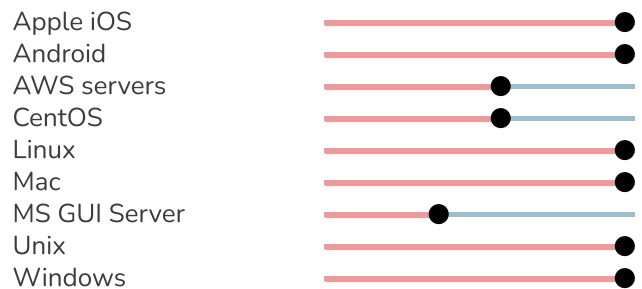

💼 Experience Highlights

content and file management, picture enhancements, for web development needs.
- Successfully created and delivered customizable database management solution incorporating object-oriented programming mostly Java.
